Abstract of JP 2001247453 (A)

PROBLEM TO BE SOLVED: To obtain a soft capsule formulation in which a film component itself is capable of producing even pharmacodynamic effects. SOLUTION: This film for the soft capsule consists essentially of gelatin and further comprises at least one kind selected from chondroitin sulfate and salts thereof. The soft capsule formulation is obtained by covering a fat-soluble ingredient and/or an oil and fat with the film.
